Fourier-GUTenberg provides several logos and ornaments: they are now usable by those who do not want to use the Fourier-GUTenberg font system. In this case, just call the *fourier-orns* package (**\usepackage{fourier-orns}**). Remember that:

* You have to install Fourier-GUTenberg anyway.
* If you call *fourier*, you should *not* call *fourier-orns*, because *fourier* will do it anyway. All the commands described here may be used with *fourier*.

Here are the provided symbols:

* A variant of the euro symbol: **\eurologo €, €**.

  Please note that the **\textit** command will not change the slant of this symbol, but **\textsl{\eurologo} €** will do it.

* A “starred” bullet **\starredbullet**: used as the item mark in this document.

* Decos and logos typesetted in **\LARGE** size:

  
  \begin{verbatim}
  \noway \textxswup \decoone \decothreeleft \decofourleft \floweroneleft \lefthand \decosix \\
  \textxswdown \decotwo \decothreeright \decofourright \floweroneright \righthand \bomb
  \end{verbatim}

  1
+ Smileys typesetted in \LARGE size:

\grimace \[ \text{XD} \] \textthing \[ \Rightarrow \]

+ Leaves typesetted in \LARGE size:

\leafleft \[ \leftarrow \] \leafright \[ \rightarrow \]
\leafNE \[ \uparrow \] \aldine \[ \leftarrow \]
\aldineleft \[ \leftarrow \] \aldineright \[ \rightarrow \]
\aldinesmall \[ \leftarrow \]
