The \texttt{etexcmds} package

Heiko Oberdiek∗
<heiko.oberdiek at googlemail.com>

2016/05/16 v1.6

Abstract

New primitive commands are introduced in $\varepsilon$-\TeX. Sometimes the names collide with existing macros. This package solves this name clashes by adding a prefix to $\varepsilon$-\TeX’s commands. For example, $\varepsilon$-\TeX’s $\texttt{\unexpanded}$ is provided as $\texttt{\etex@unexpanded}$.

1 Documentation

1.1 \unexpanded

New primitive commands are introduced in \TeX. Unhappily \unexpanded collides with a macro in Con\TeXt with the same name. This also affects the \LaTeX world. For example, package m-ch-de loads \texttt{base/syst-gen.tex} that redefines \unexpanded. Thus this package defines \etex@unexpanded to get rid of the name clash.

\ifetex@unexpanded

Package etexcmds can be loaded even if \TeX is not present or \unexpanded cannot be found. The switch \ifetex@unexpanded tells whether it is safe to use \etex@unexpanded. The switch is true (\iftrue) only if the primitive \unexpanded has been found and \etex@unexpanded is available.

1.2 \expanded

Probably \expanded will be added in pdf\TeX 1.50 and Lua\TeX. Again Con\TeXt defines this as macro. Therefore version 1.2 of this packages also provides \etex@expanded and \ifetex@unexpanded.

2 Implementation

2.1 Reload check and package identification

Reload check, especially if the package is not used with \LaTeX.

4 Installation

4.1 Download

Package. This package is available on CTAN\(^1\):

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant\ ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

CTAN:install/macros/latex/contrib/oberdiek.tds.zip

TDS refers to the standard “A Directory Structure for \TeX\ Files” (CTAN:tds/tds.pdf). Directories with \texttt{texmf} in their name are usually organized this way.

4.2 Bundle installation

Unpacking. Unpack the \texttt{oberdiek.tds.zip} in the TDS tree (also known as \texttt{texmf} tree) of your choice. Example (linux):

\begin{verbatim}
  unzip oberdiek.tds.zip -d ~/texmf
\end{verbatim}

Script installation. Check the directory TDS:scripts/oberdiek/ for scripts that need further installation steps. Package attachfile2 comes with the Perl script \texttt{pdfatfi.pl} that should be installed in such a way that it can be called as \texttt{pdfatfi}. Example (linux):

\begin{verbatim}
  chmod +x scripts/oberdiek/pdfatfi.pl
  cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
\end{verbatim}

\(^1\)http://ctan.org/pkg/etexcmds
4.3 Package installation

Unpacking. The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain TeX:

```
tex etexcmds.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as texmf tree):

- `etexcmds.sty` → `tex/generic/oberdiek/etexcmds.sty`
- `etexcmds.pdf` → `doc/latex/oberdiek/etexcmds.pdf`
- `test/etexcmds-test1.tex` → `doc/latex/oberdiek/test/etexcmds-test1.tex`
- `test/etexcmds-test2.tex` → `doc/latex/oberdiek/test/etexcmds-test2.tex`
- `test/etexcmds-test3.tex` → `doc/latex/oberdiek/test/etexcmds-test3.tex`
- `test/etexcmds-test4.tex` → `doc/latex/oberdiek/test/etexcmds-test4.tex`
- `etexcmds.dtx` → `source/latex/oberdiek/etexcmds.dtx`

If you have a docstrip.cfg that configures and enables docstrip’s TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

4.4 Refresh file name databases

If your TeX distribution (TeX, miktex, …) relies on file name databases, you must refresh these. For example, TeX users run texhash or mktexlsr.

4.5 Some details for the interested

Unpacking with LATEX. The .dtx chooses its action depending on the format:

- **plain TeX**: Run docstrip and extract the files.
- **LATEX**: Generate the documentation.

If you insist on using LATEX for docstrip (really, docstrip does not need LATEX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{etexcmds.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfLaTeX:

```
pdflatex etexcmds.dtx
makeindex -s gind.ist etexcmds.idx
pdflatex etexcmds.dtx
makeindex -s gind.ist etexcmds.idx
pdflatex etexcmds.dtx
```
5 Catalogue

The following XML file can be used as source for the \TeX{} Catalogue. The elements \texttt{caption} and \texttt{description} are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is \texttt{etexcmds.xml}.

```xml

6 History

[2007/05/06 v1.0]
- First version.

[2007/09/09 v1.1]
- Documentation for \texttt{\ifetex@unexpanded} added.
- Catcode section rewritten.

[2007/12/12 v1.2]
- \texttt{\etex@expanded} added.

[2010/01/28 v1.3]
- Compatibility to ini\TeX{} added.

[2011/01/30 v1.4]
- Already loaded package files are not input in plain \TeX{}.
