1 Introduction

This document describes the nummat option for the SVJOUR \LaTeX{} document class. For details on manuscript handling and the review process we refer to the Instructions for authors in the printed journal. For style matters please consult previous issues of the journal.

2 Initializing the class

As explained in the main Users guide you can begin a document for Numerische Mathematik by including

\documentclass[nummat]{svjour}

as the first line in your text. All other options are also described in the main Users guide.

3 Extra commands

There is only one additional command:

\subclass{classification}

It is needed to specify the Mathematics Subject Classification at the end of the abstract. This command is similar to \keywords and should appear as the last command inside the \texttt{abstract} environment.
