An Example of the Usage of the Tufte-Handout Style

The Tufte-\LaTeX Developers

June 21, 2015

This document describes the Tufte handout \LaTeX document style. It also provides examples and comments on the style’s use. Only a brief overview is presented here; for a complete reference, see the sample book.

The Tufte-\LaTeX classes define a style similar to the style Edward Tufte uses in his books and handouts. Tufte’s style is known for its extensive use of sidenotes, tight integration of graphics with text, and well-set typography. This document aims to be at once a demonstration of the features of the Tufte-\LaTeX document classes and a style guide to their use.

Page Layout

Headings

This style provides a- and b-heads (that is, \section and \subsection), demonstrated above.

The Tufte-\LaTeX classes will emit an error if you try to use \subsubsection and smaller headings.

\textbf{In his later books,} Tufte starts each section with a bit of vertical space, a non-indented paragraph, and sets the first few words of the sentence in \textit{small caps}. To accomplish this using this style, use the \newthought command:

\newthought{In his later books}, Tufte starts...

Sidenotes

One of the most prominent and distinctive features of this style is the extensive use of sidenotes. There is a wide margin to provide ample room for sidenotes and small figures. Any \footnotes will automatically be converted to sidenotes. If you’d like to place ancillary information in the margin without the sidenote mark (the superscript number), you can use the \marginnote command.

The specification of the \sidenote command is:

\begin{verbatim}
\sidenote{⟨number⟩}{⟨offset⟩}{Sidenote text.}
\end{verbatim}

Both the \langle number⟩ and \langle offset⟩ arguments are optional. If you provide a \langle number⟩ argument, then that number will be used as the

1 Inspired by Edward R. Tufte!

3 This is a sidenote that was entered using the \footnote command.

This is a margin note. Notice that there isn’t a number preceding the note, and there is no number in the main text where this note was written.
sidenote number. It will change of the number of the current sidenote only and will not affect the numbering sequence of subsequent sidenotes.

Sometimes a sidenote may run over the top of other text or graphics in the margin space. If this happens, you can adjust the vertical position of the sidenote by providing a dimension in the (offset) argument. Some examples of valid dimensions are:

\begin{itemize}
\item 1.0in
\item 2.54cm
\item 254mm
\item 6\baselineskip
\end{itemize}

If the dimension is positive it will push the sidenote down the page; if the dimension is negative, it will move the sidenote up the page.

While both the (number) and (offset) arguments are optional, they must be provided in order. To adjust the vertical position of the sidenote while leaving the sidenote number alone, use the following syntax:

\begin{verbatim}
\sidenote{}{(offset)}{Sidenote text.}
\end{verbatim}

The empty brackets tell the \sidenote command to use the default sidenote number.

If you only want to change the sidenote number, however, you may completely omit the (offset) argument:

\begin{verbatim}
\sidenote{(number)}{Sidenote text.}
\end{verbatim}

The \marginnote command has a similar offset argument:

\begin{verbatim}
\marginnote{(offset)}{Margin note text.}
\end{verbatim}

References

References are placed alongside their citations as sidenotes, as well. This can be accomplished using the normal \cite command.\footnote{The first paragraph of this document includes a citation.}

The complete list of references may also be printed automatically by using the \bibliography command. (See the end of this document for an example.) If you do not want to print a bibliography at the end of your document, use the \nobibliography command in its place.

\cite{(offset)}{bibkey1,bibkey2,...}

Figures and Tables

Images and graphics play an integral role in Tufte’s work. In addition to the standard figure and tabular environments, this style provides special figure and table environments for full-width floats.
Full page–width figures and tables may be placed in figure\* or table\* environments. To place figures or tables in the margin, use the marginfigure or margintable environments as follows (see figure 1):

```latex
\begin{marginfigure}
  \includegraphics{helix}
  \caption{This is a margin figure.}
\end{marginfigure}
```

The marginfigure and margintable environments accept an optional parameter \langle offset\rangle that adjusts the vertical position of the figure or table. See the “Sidenotes” section above for examples. The specifications are:

```latex
\begin{marginfigure}\langle offset\rangle
  ...
\end{marginfigure}
```

```latex
\begin{margintable}\langle offset\rangle
  ...
\end{margintable}
```

Figure 2 is an example of the figure\* environment and figure 3 is an example of the normal figure environment.

```latex
\begin{figure}
  \centering
  \begin{tikzpicture}
    \draw[->] (-5,0) -- (5,0) node[right] {$x$};
    \draw[->] (0,-1) -- (0,3) node[above] {$y$};
    \draw[very thick, red] (0,0) sin (1,1) cos (2,0) sin (3,-1) cos (4,0) sin (5,1);\end{tikzpicture}
  \caption{This graph shows $y = \sin x$ from about $x = [-10,10]$. Notice that this figure takes up the full page width.}
\end{figure}
```

```latex
\begin{figure}
  \centering
  \begin{tabular}{cccc}
    $n = 1$ & $n = 2$ & $n = 3$ & $n = 4$ & $n = 5$
  \end{tabular}
  \caption{Hilbert curves of various degrees $n$. Notice that this figure only takes up the main textblock width.}
\end{figure}
```

Table 1 shows table created with the booktabs package. Notice the lack of vertical rules—they serve only to clutter the table’s data.

**Full-width text blocks**

In addition to the new float types, there is a fullwidth environment that stretches across the main text block and the sidenotes area.
Margin | Length
---|---
Paper width | 8\(\frac{1}{2}\) inches
Paper height | 11 inches
Textblock width | 6\(\frac{1}{2}\) inches
Textblock/sidenote gutter | 3/8 inches
Sidenote width | 2 inches

\begin{fullwidth}
Lorem ipsum dolor sit amet...
\end{fullwidth}

**Typography**

**Typefaces**

If the Palatino, Helvetica, and Bera Mono typefaces are installed, this style will use them automatically. Otherwise, we’ll fall back on the Computer Modern typefaces.

**Letterspacing**

This document class includes two new commands and some improvements on existing commands for letterspacing.

When setting strings of **ALL CAPS** or **SMALL CAPS**, the letter-spacing—that is, the spacing between the letters—should be increased slightly. The `\allcaps` command has proper letterspacing for strings of **FULL CAPITAL LETTERS**, and the `\smallcaps` command has letterspacing for **SMALL CAPITAL LETTERS**. These commands will also automatically convert the case of the text to upper- or lowercase, respectively.

The `\textsc` command has also been redefined to include letterspacing. The case of the `\textsc` argument is left as is, however. This allows one to use both uppercase and lowercase letters: **THE INITIAL LETTERS OF THE WORDS IN THIS SENTENCE ARE CAPITALIZED.**

---

Table 1: Here are the dimensions of the various margins used in the Tufte-handout class.

---

Installation

To install the Tufte-\LaTeX{} classes, simply drop the following files into the same directory as your .tex file:

\begin{itemize}
  \item tufte-book.cls
  \item tufte-common.def
  \item tufte-handout.cls
  \item tufte.bst
\end{itemize}

More Documentation

For more documentation on the Tufte-\LaTeX{} document classes (including commands not mentioned in this handout), please see the sample book.

Support

The website for the Tufte-\LaTeX{} packages is located at http://code.google.com/p/tufte-latex/. On our website, you’ll find links to our svn repository, mailing lists, bug tracker, and documentation.
